José Estrada

Frontend Developer

PROFILE

I'm a front-end developer with experience building web apps with React.js and mobile development with React Native.

I use the MERN stack (Mongo, Express, React and Node) together with Typescript in order to create modern applications. I am always looking to improve my skills through continuous study and participation in communities to grow professionally in order to contribute to the work group with innovative ideas.

EXPERIENCE

LEANTECH
Dic 2021 – Today

Member of the development team at the company's Stakcore and Effiency application. The roles included Frontend Developer, Tester. Highlights:

• Implemented features and designed the system for an enterprise shipping service application to store and ship packages.

• Fix bugs and performance issues applying modern development practices and proper use of technologies used in the project writing maintainable code, develop new features together with front-end and back-end engineers.

• Implementation of integration tests on components with the React Testing Library in order to verify and validate the functionality of an application program with the objective of guaranteeing that the software product is free of defects. In addition to validating the interfaces or integration points between individual functions or components.

• Implement designs created by the UI/UX designer, applying pixel perfect encoding to provide the best user experience by identifying application improvements based on business logic.

• Mentor interns (company support function) on the project and provide regular internal technical talks. (JS, HTML, CSS, React, Testing Library and Node)

ZANACODE
Jan 2021 – Dic 2021

Frontend Developer with technologies as React and Node, in an app, to join families with adventures nearby, these adventures can be created and easily search with a backend with elastic search.

Develop applications using HTML & CSS, and JavaScript including responsive/adaptive rendered through media queries.
